

For the Second Year, IDFC Members Confirm their Large Share of Global Green Financing Flows

Frankfurt, November 20, 2013

5 With USD 95 billion of new green finance commitments in 2012, IDFC members increase their significant contribution to the green and climate change agendas

10 Today, the IDFC, the International Development Finance Club, which brings together 20 leading international, national and sub-regional development banks from across the world in a unique setting of cooperation, published for the second consecutive year its annual mapping of green finance.

15 The *IDFC Green Finance Mapping Report 2013* compiles the activity of IDFC members in 2012 concerning the financing of mitigation to climate change operations, especially in the areas of renewable energy and energy efficiency, as well as adaptation to climate change and other measures for environmental protection. The IDFC report was prepared by energy and climate consultancy Ecofys.

20 In 2012 IDFC members made new commitments representing USD 95 billion in green finance. This represents an increase of USD 6 billion from 2011 to 2012, as reported in the previous year's green finance mapping report. The largest share of IDFC members' green financing, USD 80 billion, was invested in climate change activities with sustainable development co-benefits. IDFC members' climate finance includes USD 65 billion to clean energy and mitigation of greenhouse gas emissions activities, and USD 14 billion to adaptation to climate change.

30 The report also shows that USD 59 billion, or 62% of the total green finance for 2012 was channeled to developing countries. This includes finance flows from institutions based in OECD countries to non-OECD countries, which amounts to USD 15 billion, as well as USD 44 billion from institutions based in non-OECD countries. These figures show the commitment and importance that IDFC members give to assisting green and climate activities in developing countries.

40 The findings of the report illustrate the financial and technical capacities and experience of IDFC's development banks to mobilize, intermediate, deliver, and leverage large and increasing amounts of green and climate financing at the international and domestic levels. This makes IDFC members "*well positioned as a vehicle to channel additional scaled-up climate finance, from*

international funds such as the soon to be operational Green Climate Fund’ as indicated in the report.

Frankfurt, November 20, 2013

50 IDFC’s mapping report also contributes to a more defined
international methodology and process for green and climate
finance tracking, providing consistent and transparent information
from a major group of development banks based in OECD and non-
OECD countries, representing a considerable share of public
financing. In addition, it allows for the mainstreaming of the green
55 and climate change agendas across IDFC members.
“*IDFC provides a proactive platform from which to stimulate the
sharing of experiences and shape future discussions on further
alignment of climate finance-tracking methodologies internationally*”
states the report.
