

Mangroves for Community and Climate

Mangroves for Community and Climate

Delivering Nature-based Solutions for Climate

Biodiversity
1M hectares of mangroves protected or restored

Climate Change Mitigation
1.8B mt CO2eq secured

Community Adaptation
300k people with increased resilience to climate change

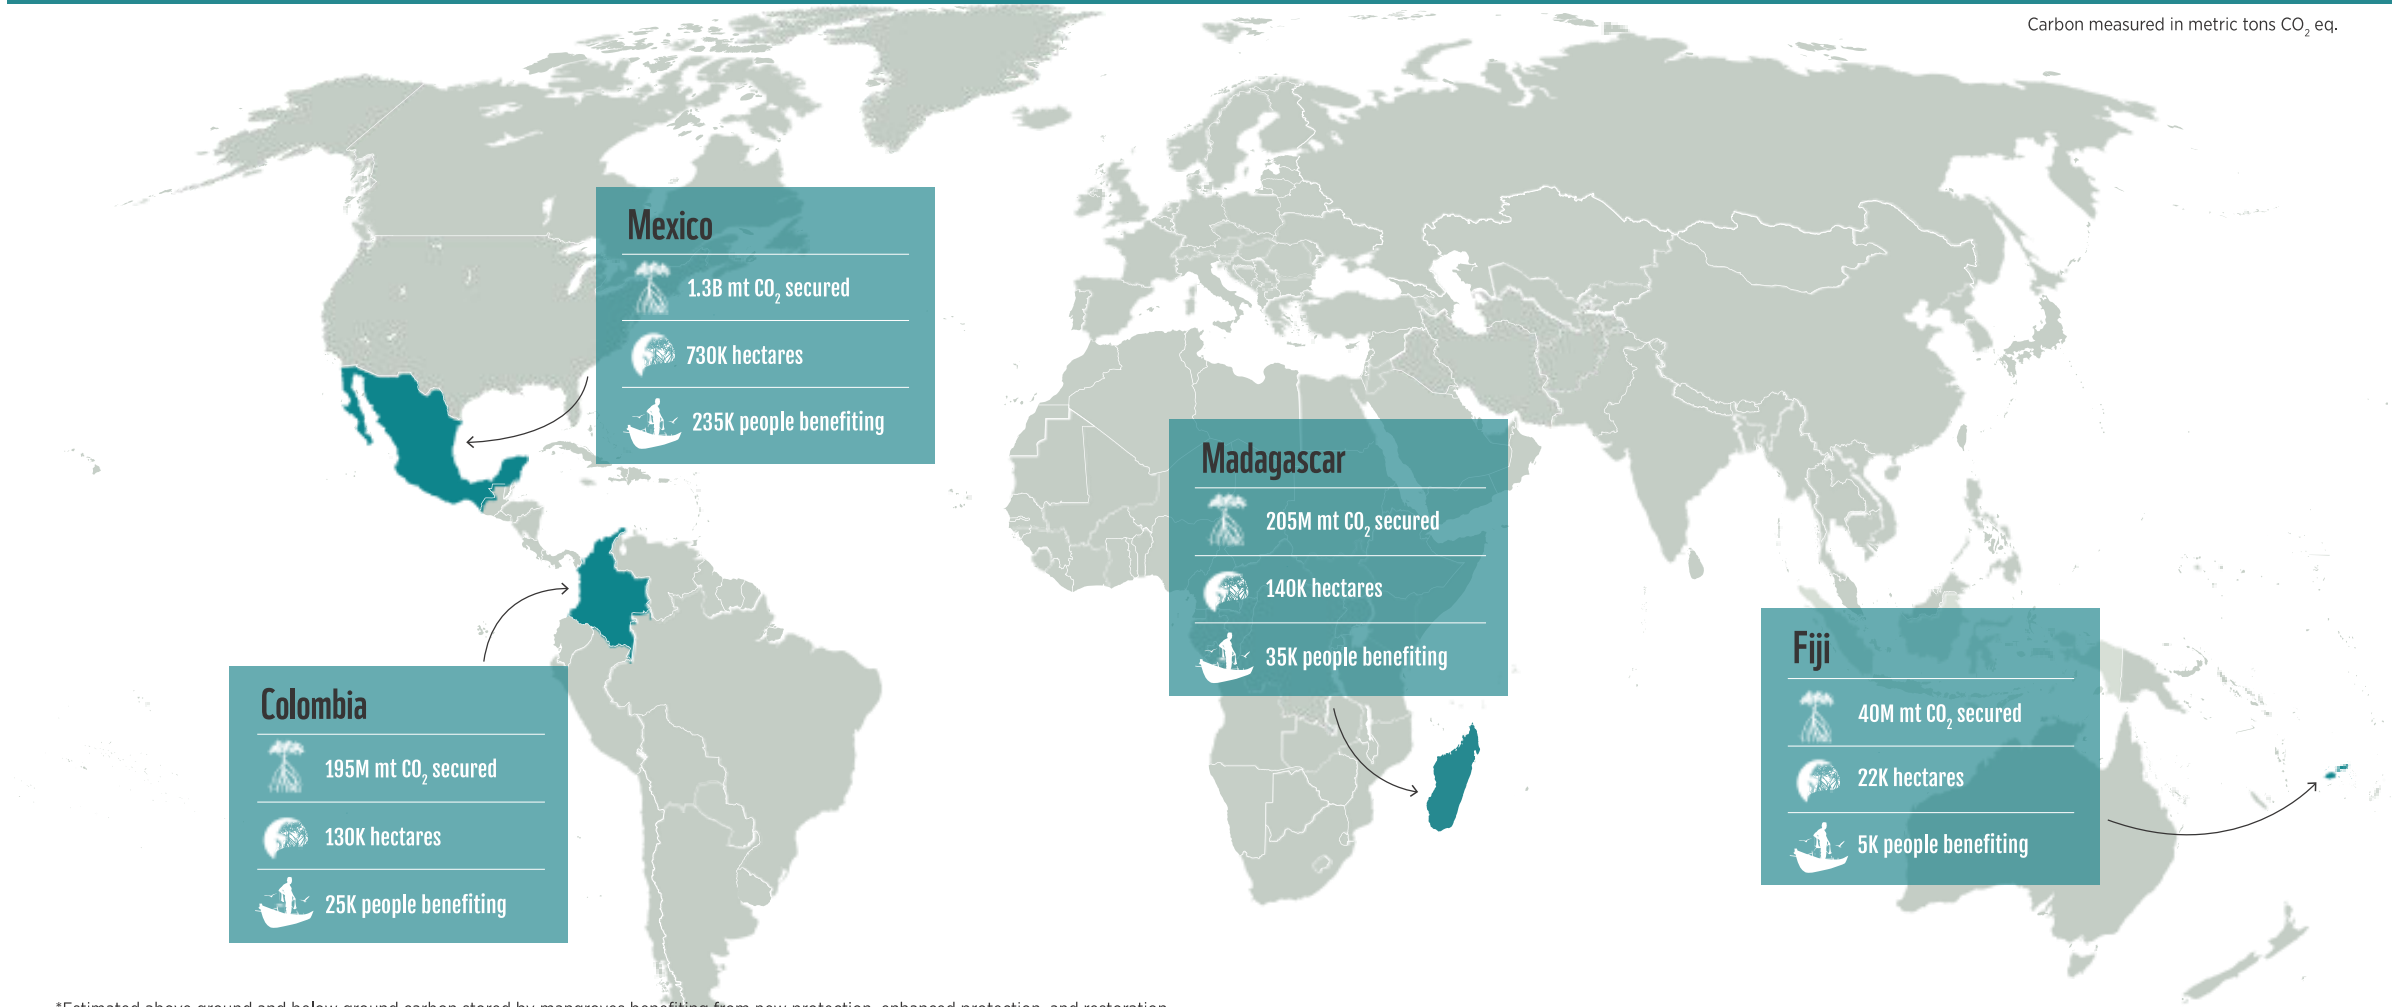

Mangroves for Community and Climate

Project Geographies

Carbon secured* Hectares protected** Community benefits***

Carbon measured in metric tons CO_2 eq.

*Estimated above ground and below ground carbon stored by mangroves benefiting from new protection, enhanced protection, and restoration.
**Restored, newly protected, or enhanced protection.
***People benefiting annually from improved ecosystem services, including resilience to coastal flooding and extreme storm events.

Adapting to Climate Change in Harmony with Nature

3 core strategies to build social-ecological resilience

1

Use nature to help people adapt to climate change and its impacts.

ECOSYSTEM-BASED ADAPTATION

2

Use complementary measures that avoid or reduce harm to nature.

NATURE-FRIENDLY ADAPTATION

3

Help nature adapt to climate change.

CLIMATE-SMART CONSERVATION

Mangroves for Community and Climate

3 core strategies at work

TARGET POPULATIONS: COASTAL COMMUNITIES, FISHERS

1

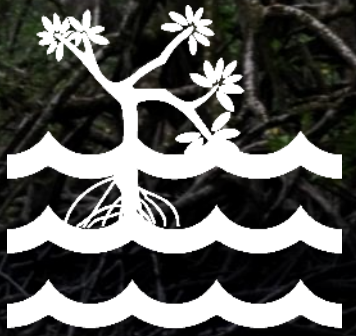

Restoring and protecting mangroves to reduce impacts of coastal storms and erosion.

2

Diversifying sustainable livelihoods and improving disaster management practices.

3

Developing and climate-smart restoration decision support tool for use at conservation sites.
