

## Time for Life (T4L) Approach: From Landscape Analysis to Impacts at Scale

**AFD - Agence Française de Développement , co-organized by IUCN – International Union for Conservation of Nature  
6 November, 9:30 – 11:00**

The T4L approach relies on an innovative screening strategy informed by global spatial datasets to overlay ecological risks and opportunities with sectorial impacts in order to map and identify nature-positive transition opportunities at the landscape scale. This side-event will present the framework combining spatial finance with stakeholder involvement to establish diversified, innovative vehicles that can secure and maximize financial performance and attract private sector finance. T4L invests through a 'buy and build' approach in selecting large-scale, cash-flow delivering real assets and businesses that unlock change effects at landscape level and build economic and ecological synergies at scale leading to higher asset valuation.
