

Assessing Company Transition with the Deep Decarbonization Pathways in Brazil and Mexico

AFD - Agence Française de Développement, co-organized by IDDRI - Institut du Développement Durable et des Relations Internationales and ADEME - Agency for Environment and Energy Management.

9 November, 16:00 – 17:30

The Paris Agreement enacted two complementary dynamics for an ambitious action on climate. On the one hand, the mitigation and adaptation commitments as well as the policies deployed fall to the national governments, who bear the responsibility to submit their national contributions to the global effort. On the other hand, non-state actors, notably private companies, have significantly contributed to the construction of a favorable dynamic, and were officially recognized for the first time within the framework of international negotiations. These dynamics remain, however, too disconnected at this stage, and there is presently no device to support a constructive dialogue between governments and private companies.

The following side-event aims at enhancing the collective ambition of reducing greenhouse gases (GHG) emissions in emerging economies, showcasing the sectoral roadmaps and strategies for decarbonization for companies and promoting the virtuous cycle between more ambitious commitments set by the states and strategies of private companies.

Speakers

- Stephanie Bouzigues-Eschmann, Fonds Français pour l'Environnement Mondial
- Sébastien Treyer, IDDRI
- Emilio Lebre La Rovere, Federal University of Rio de Janeiro
- Daniel Buira, Tempus Analitica
- Amir Sokolowski, CDP
- Romain Poivet, ADEME International

Moderated by Yann Briand and Fernanda Coletti
