

What are the levers to boost financing of the energy transition and resilience in Africa?

Climate Chance

11 November, 11:30 – 13:00

Climate Chance proposes to bring together African Public Development Banks with organizations active at the territorial level in Africa, in order to try to identify the levers that would make it possible to accelerate the financing of energy transition and resilience in Africa.

The African continent has the highest urban growth in the world which leads to extremely high funding needs for climate-friendly infrastructure, particularly in secondary cities, but also for nature-based solutions to strengthen the adaptation and resilience of cities to climate change. How can we achieve a combination of economic growth, the fight against climate change and the preservation of biodiversity in Africa? What financing strategies and instruments for the climate transition of cities in Africa? What support mechanisms for local authorities to organize and implement for their climate transition, on project preparation, training, and other specific mechanisms?

Speakers

- Romain Crouzet, Climate Change Association
- Liane Schalatek, Heinrich-Böll Stiftung
- Al Hamdou Dorsouma, African Development Bank
- Pa Ousman Jarju, Green Climate Fund
- Aurélio Menendez, World Bank
